

Product Specification

- Hangers installed on measured 24" centers so all the hangers carry an equal load adding to the longevity of the product.
 - Screw type invisible hangers are used, no nails (nails have a tendency to pull away from the house leading to the early demise of the product and nail head can be seen from the ground giving a unclean look)
 - Large 2-5/8" square holes are punched for downspouts (most are rectangle holes and often only measuring 1-1/2" x 2-1/2" if not smaller providing inadequate drainage and are more likely to clog)
 - Large 2-5/8" x 2-5/8" square downspouts are used providing much better flow than rectangle 2" x 3" pipes (even larger 3" x 3" are also available when higher volume is needed)
 - 2 pipe straps per downspout pipe (at the seams, this provides better support)
 - Continuous 28 gauge 5" steel trough
 - Colour matching screws standard so that they blend into the metal and provide a clean look.
 - 24 month warranty on new installs
 - Large volume roofs that drain onto lower roofs will have a downspout directly into the lower eavestrough so that it does not drain onto the roof and wear out the shingles
-
